Data entry:

Dashboard of aggregated data + data-based plots
+Oral examinations single students
Results are aggregated per course/student year (?)
Students show up in data entries when they write their first exam in group

Study programme may per student change
How can we use this to validate the consistency

Nice to have a history later on
Invalid grade (?) - how to handle this:
What kind of data can be entered in wrong way, parse, suggest corrections to user

Record the grades who attended the exam

Not added to db:
Doctors note da (?)
Cheats ta
Does not show up e

Courses:
New study acronym found -> Allocate to respective course... add as permanent alias

Data view

Mapping of user -> course -> semester
Recent exams are the most important

No editing of individual students? Debatable

For dashboard:
How many exams students participated in
The best grade is final grade
Nice to have: if: student - grade X (N many tries)
Multiple students in rows
And then all courses as columns
For all courses

Filtering applied to each section (students/ courses/years)

Average grade per year/course/student group
Nr of exams

matrikulation number cannot change
If Exmatriculates inmatriculates -> consider as new person
Overview good grades green + Bad red (Gradient in between)

Workflow of grade addition:
Easiest:
Select sheet, Ctrl c ctrl v, Tabular insertion/ comma separated values
OR: Excel parsing

Possible Grades for normal exams
5.0 4.0 3.7 3.3 3.0 2.7 2.3 2.0 1.7 1.3 1.0
increments only valid grades

Thesis:
Cases multiple examiners
Disagree - avg grade is taken (any floating value rounded to single digit)

Override grades (?) Debatable
Nice to have override

Add new courses:
Informational content (?) Leave out for now

Credit may change
Diff course 6 ver 3 ver separate courses

Keep data forever (what about gdpr then?)

Archived courses maybeee go in archived tab, strictly not in current analysis views

Current students -> When grades show up
Student did not write exams 3 years -> no show up, No data cluttering, especially if they left

Manually add students in SE Study Group
More metadata per SE students should be available

Which semester they started at: wise sose

Other students are kept simple, but keep it flexible for future MVP dev

Thesis - student has 2 supervisors
Written grade + oral grade
27 ects + 3 ects respectively
Then -> aggregate as single exam

Credit points data should be available alongside grades (?)

We dont want to have exact graduation grade of students

Dashboard again:
How many participants per course
%/nr of sucessfull passings
Avg grade of only people who passed (median val)
Best mark of certian semester (may be as boxwhisker outlier)
The semesters when exams occured

The data plotting over time

SE Master specific - compulsory and elective modules overview
Separate them out: progress for compulsory and elective, "what WE offer"

Metadata
Metdata is relevant for that study program
For master specifically

Modulhandbuch - full specification of courses
But, users will enter the courses manually
No hardcoded courses
Thesises - maybeeee :D

No user management for now

Internal network
Not to worry about encryption
This will change at some point

Basic system

A list of courses
Button -> Click -> enter new data -> show analysis views

White theme
A nice UI
Kaddy standards theme
More happy if:
Theme easy to maintain
Works with frameworks we developers choose
Maintainability is more important
UI design - to think of

Two teachers enter data. That can lead to Concurrency
Race conditions of data
Think ahead! No data loss + rollback mechanisms

Server crashes -> no partial data storage
Acid compliant
Regular data backups ? Vm or db

Socument what needs to be backed up ->
Normal backup tools by users

They want to switch from .xslx to .ods

Scrum workflow
User stories
Planning poker
Budget for the sprint
Tickets for the sprint

Appointment
For this sprint we wil lthink of this this this
